November X, 010

Dear _____:

My name is Jim Walther, Executive Director of the National Museum of Nuclear Science & History. I want to take this opportunity to introduce a unique weeklong national celebration to you. National Nuclear Science Week will hold its second annual national observance January 24-28, 2011. This event is a great opportunity to share the good news about nuclear science and the green energy future it can support.

During this week, students and teachers will engage with professionals in all areas of the nuclear field to gain a better understanding of the role of this vital energy resource. Each day of that week is dedicated to a particular portion of the world of nuclear, thereby giving focus for that information. One of the days includes a focus on careers, jobs and preparations to join the technical workforce of the future.

I invite you to:

- Have a networking event with an ANS or NA-YGN chapter in your area to celebrate our profession.
- Print and present the proclamation certificate to your dean or other university official.
- Share nuclear information with your school newspaper in honor of the week – a nuclear clean air energy fact sheet is attached.

I invite you to go to the Website: www.NuclearScienceWeek.org and see other ideas in the Celebration Guide and other suggested student/teacher resources.

I hope you will choose to participate and become involved in this important week. We welcome you to our celebration!

If I can provide further information about the week, please have your contact me at jwalther@nuclearmuseum.org.

Sincerely,

Jim Walther
Executive Director,
National Museum of Nuclear Science & History
Chair, National Steering Committee, National Nuclear Science Week
